

Coprinellus micaceus

Glimmertintling

Fungi, Dikarya, Basidiomycota, Agaricomycotina, Agaricomycetes, Agaricomycetidae, Agaricales, Psathyrellaceae

Legitimate (Bull.) Vilgalys, Hopple & Jacq. Johnson 2001
Jacq. Johnson

Aktueller Name gem. MycoDB: Coprinellus micaceus (Bull.) Vilgalys, Hopple & Jacq. Johnson, Taxon 50 (1): 234 (2001) [MB474361]

Basionym: Agaricus micaceus Bull., Herbar de la France 6: t. 246 (1792) [MB245257]

Obligates Synonym: Coprinus micaceus (Bull.) Fr., Epicrisis Systematis Mycologici: 247 (1838) [MB196470]

Taxonomische Synonyme: Coprinus micaceus var. hyalinus Bogart, The Genus Coprinus in Washington and Adjacent Western States: 234 (1975) [MB127237]

Fund aus Andalusien in einem Park nach kurzem Regen.

makroskopisch

Stielfarbe / Rinde

Weiss

Sporenfarbe / Sporenpulver (Abwurf)

Schwarz

mikroskopisch

Sporenlänge

(7) 8-11 µm

Sporenfarbe in KOH (Mik)

Schwarzbraun

Sporenfarbe in Wasser (Mik)

Rotbraun

Sporenform

Mitraförmig

Sporenmerkmale

Dickwandig, mit zentralem Keimporus, dickwandig, teilweise mit Perispor und Keimspalte

Hutdeckschicht

Aus blasigen Zellen, bräunlich

Arten:
