

Didymium squamulosum

Protozoa, Myxomycota?, Physarales, Didymiaceae, Didymium

Legitimate (Alb. & Schwein.) Fr. & 1818
Palmquist

Aktueller Name gem. MycoDB: Didymium squamulosum (Alb. & Schwein.) Fr. & Palmquist, Symbolae Gasteromycorum 3: 19 (1818) [MB181562]

Basionym: Diderma squamulosum Alb. & Schwein., Conspectus Fungorum in Lusatiae superioris: 88, t. 4:5 (1805) [MB214550]

Obligates Synonym: Conium squamulosum (Alb. & Schwein.) Spreng., Caroli Linnaei systema vegetabilium 4 (1): 528 (1827) [MB232738]

Taxonomische Synonyme:

Didymium applanatum Nann.-Bremek., Proceedings van de Koninklijke Nederlandse Akademie van Wetenschappen Section C 74: 352 (1971) [MB313076]

Didymium praecox de Bary, Fungi Europaei exsiccati Cent. 4: no. 367 (1861) [MB142211]

Didymium praecox de Bary ex Rostaf., Sluzowce Monografia: 163 (1875) [MB841906]

makroskopisch

Substrat

Ziegenkötel

Stielmerkmale

Gefurcht

Sporenfarbe / Sporenpulver (Abwurf)

Dunkelbraun

mikroskopisch

Sporenmasse

9 - 10,5 µm-11

Sporenmembran, Oberfläche, Skulptur

Grobwarzig/stachelig

Gattung/en:

Didymium
