

**Mycena crocata****Gelbmilchender Helmling**

Fungi, Dikarya, Basidiomycota, Agaricomycotina, Agaricomycetes, Agaricomycetidae, Agaricales, Mycenaceae

Legitimate (Schrad.) P. Kumm. 1871

Aktueller Name gem. MycoDB: *Mycena crocata* (Schrad.) P. Kumm., Der Führer in die Pilzkunde: 108 (1871) [MB169501]Basionym: *Agaricus crocatus* Schrad., Spicilegium Florae Germanicae: 127 (1794) [MB233205]Obligates Synonym: *Agaricus croceus* var. *crocatus* (Schrad.) Pers., Mycologia Europaea 3: 130 (1828) [MB497762]

makroskopisch

Stielmerkmale

Unter der Lupe Stiel quer gebändert

Milchfarbe

Orange, gelb-orange

Oxidation / Verfärbung: Fruchtkörper, Milch, Röhren

Orangefleckig

botanisch / ökologisch

Standort

Buchenwald

mikroskopisch

Zystidenform

Flaschenförmig, büstlig-igelig

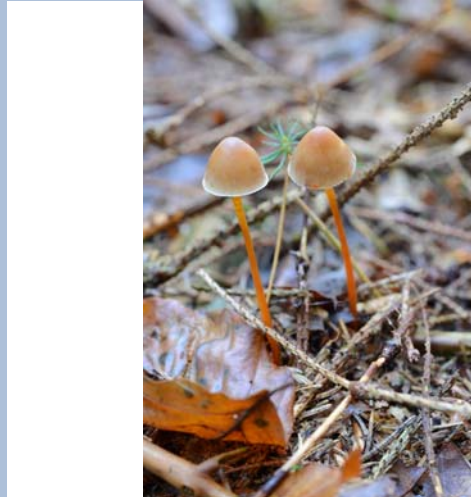

Gattung/en:*Mycena* <https://www.mycopedia.ch/pilze/1061.htm>**Siehe auch***Mycena epipterygia* <https://www.mycopedia.ch/pilze/4357.htm>

Mycena crocata

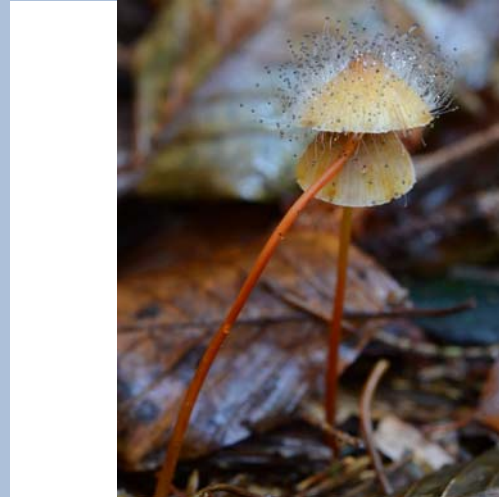

Gelbmilchender Helmling
